PROFILE

Senior Software Developer and Team Lead with a proven growth path from junior to senior roles, specializing in web, mobile, and banking application development. Experienced in .NET, Xamarin, Sitecore, PHP, and Azure-based solutions. Currently mentoring junior developers, coordinating team efforts, and driving project delivery through strong technical leadership and ownership. Known for translating business requirements into scalable, secure solutions while continuously pushing for quality, innovation, and on-time delivery.

WORK EXPERIENCE

June '21- Present

Senior Software Developer
Netiks International

Developed mobile and online banking applications for the Lebanese banking sector, using .NET and Xamarin to build secure payment, transfer, and client management platforms. Worked with Sitecore to deliver a fully customized CMS website for a major bank. Gained experience with Azure Machine Learning and Python for AI projects, and recently built several Power Apps solutions.

Feb '21– May '21

Web Developer
Broaden

Started my journey as a PHP developer at Broaden, where I quickly learned MySQL and embraced the importance of taking responsibility. Gained valuable hands-on experience, built strong foundations in web development, and adapted to professional project workflows.

PROJECTS

LEBANESE BANKING SECTOR MOBILE AND ONLINE BANKING APPLICATIONS

Banking applications that consist of payments, transfers and full client managements as well as services. Admin and client portals included. Full notification implementation. I used .Net for the implementation of the

online banking application, as well as worked with the implementation of the services necessary to communicate with the bank to retrieve accounts and what not as well as send transfer requests and manage their response. For the mobile applications included I've worked with Xamarin for Android and iOS to develop a fully functioning online

banking mobile application. For a specific bank with a custom request, I've worked with SiteCore Framework to develop a fully customized website for the bank, with a fully functioning content management system, where the clients can have full control of their website with a

user friendly interface, can manage the flow of users on their web site, can display customized banners and components following custom rules created by me.

CUSTOM AI PRODUCT

This was a custom product for my company where I cannot fully disclose the features of it, but during it I have worked on azure machine learning

(designing pipelines, running end points,..) as well as learned to code in python.

POWER APPS PROJECTS

I have recently embarked on some personal projects while learning to work with power apps, where I created many canvas apps using it.
