PROFILE

Passionate and detail-oriented software developer with strong experience in web, mobile, and banking application development. Skilled in PHP, .NET, Xamarin, Sitecore, and Azure Machine Learning. Adaptable and proactive, with a proven ability to take ownership of projects, deliver tailored solutions, and continuously expand technical expertise. Motivated to drive innovation and build high-quality digital experiences.

WORK EXPERIENCE

June '21 - Present

Intermediate Software Developer
Netiks International

Developed mobile and online banking applications for the Lebanese banking sector, using .NET and Xamarin to build secure payment, transfer, and client management platforms. Worked with Sitecore to deliver a fully customized CMS website for a major bank. Gained experience with Azure Machine Learning and Python for AI projects, and recently built several Power Apps solutions.

Feb '21 – May '21

Web Developer
Broaden

Started my journey as a PHP developer at Broaden, where I quickly learned MySQL and embraced the importance of taking responsibility. Gained valuable hands-on experience, built strong foundations in web development, and adapted to professional project workflows.

PROJECTS

LEBANESE BANKING SECTOR MOBILE AND ONLINE BANKING APPLICATIONS

Banking applications that consist of payments, transfers and full client managements as well as services. Admin and client portals included. Full notification implementation. I used .Net for the implementation of the

online banking application, as well as worked with the implementation of the services necessary to communicate with the bank to retrieve accounts and what not as well as send transfer requests and manage their response. For the mobile applications included I've worked with Xamarin for Android and iOS to develop a fully functioning online

banking mobile application. For a specific bank with a custom request, I've worked with SiteCore Framework to develop a fully customized website for the bank, with a fully functioning content management system, where the clients can have full control of their website with a

user friendly interface, can manage the flow of users on their website, can display customized banners and components following custom rules created by me.

CUSTOM AI PRODUCT

This was a custom product for my company where I cannot fully disclose the features of it, but during it I have worked on azure machine learning

(designing pipelines, running endpoints,..) as well as learned to code in python.

POWER APPS PROJECTS

I have recently embarked on some personal projects while learning to work with power apps, where I created many canvas apps using it.
